

Who are we?

Mercurial is a leading edge software research and development management company that provides cost effective solutions to your IT project development challenges. We have:

- ➔ One of the largest open source development shops in North America
- ➔ World class programming expertise in Java and .NET frameworks
- ➔ Extensive experience in embedded systems development (hardware & software), e-commerce applications, direct-to-consumer products and the latest in Web 2.0 technologies

For each of our projects, we:

- ➔ Analyze existing products and technologies
- ➔ Design a solution that fits
- ➔ Develop on schedule and on budget
- ➔ Implement the solution
- ➔ Manage all of the risks
- ➔ Support all of our work

How does Mercurial do it?

By carefully setting our sights on a realistic goal. We don't take on more than we can handle and only take on work within our capability and capacity.

That said, our unique innovative and entrepreneurial culture has attracted exceptional talent from all over the world, so we have people with direct experience in your business area, and who can be applied to your projects on an 'as required' basis. The result: substantial savings to you.

Our experts have a depth of skill and knowledge in nearly all facets of software and hardware design, development, deployment, and management that's unrivaled anywhere. Such expertise even extends to the establishment of global

software and hardware standards, with some of our key employees contributing to numerous standards bodies.

What can we do for you?

Broadly categorized, our service offerings include:

Business process review & analysis

By using traditional data flow concepts, functional analysis techniques, or object oriented analysis and design, our senior consultants assess your business, then provide detailed solution options ranging from pure process efficiency improvements to re-tooled or 'net new' systems development.

...our innovative and entrepreneurial culture has attracted exceptional talent from all over the world...

Functional & technical design specifications

We excel at producing development-ready logical and physical specifications, describing new or enhanced business requirements to the degree of detail necessary for any development team – yours, ours, or a 3rd party – to build your system.

Software engineering & project delivery

We use both adaptive and predictive methodologies to research and engineer software, according to the client's environment and preferences.

What's the bottom line?

When you succeed, we succeed! Not only do we want to work with you, we want to come back and work with you again and again! We can only do this if we deliver value to you, our client.
